

Ideation Phase

Define the Problem Statements

Date	28 September 2026
Team ID	MSU2136ab221abbee0b08a2d2c6500
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Problem Statement Template:

The project focuses on the problem faced when employee information is received in spreadsheet format and needs to be imported into ServiceNow. Manual entry can take more time and repeated imports can create duplicate employee records. The solution uses Import Sets, Transform Maps and Coalesce to make the employee data import process accurate, efficient and reliable.

A clear problem statement helps identify the employee-data management challenge and supports the development of a suitable ServiceNow solution for importing, updating and validating employee records.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an HR/Admin user	import employee data from an Excel spreadsheet into ServiceNow	entering and transferring employee records manually can be time-consuming	the employee information is received in spreadsheet format and contains multiple records	concerned about time consumption and data-entry errors
PS-2	an HR/Admin user	update existing employee records when new spreadsheet data is imported	repeated imports may create duplicate records	the same employee data may be imported more than once	concerned about duplicate and inconsistent employee records

Project Problem in simple words: Employee data from Excel needs to be imported into ServiceNow without manual effort, duplicate records or incorrect field mapping. The project addresses this using Import Sets, Transform Maps and Coalesce.
