

Project Design Phase-II

Data Flow Diagram & User Stories

Project Name: Import Data using Transform Maps (Spreadsheet)

Date: 31 January 2025

Data Flow Diagram (DFD)

The DFD represents how employee data moves through the ServiceNow import process. It shows the source spreadsheet, staging/import table, transformation process, target employee table, validation, reporting and dashboard output.

DFD Element	Data Flow / Process
External Entity	HR / Administrator provides employee spreadsheet data.
Process 1 – Load Data	Spreadsheet is uploaded through ServiceNow Load Data into the Employee Import staging table.
Data Store 1 – Employee Import	Stores imported spreadsheet records before transformation.
Process 2 – Transform Data	Transform Map maps source fields to the Employee Test target fields.
Process 3 – Coalesce / Update	Employee ID is used to identify existing records and update them instead of inserting duplicates.
Data Store 2 – Employee Test	Stores the transformed employee records.
Process 4 – Validate	Transform history and target records are checked for inserted, updated, skipped/ignored results.
Process 5 – Reporting	Employee data is used to create department, location and employee list reports.
Output – Dashboard	Reports are consolidated in the Employee Analytics Dashboard.

DFD Flow

HR / Administrator → Employee Spreadsheet → Load Data → Employee Import Table → Transform Map → Field Mapping & Coalesce → Employee Test Table → Validation / Transform History → Reports → Employee Analytics Dashboard

User Stories

Use the following template to list the user stories for the Import Data using Transform Maps project.

User Type	Functional Requirement (Use Case)	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Administrator / HR	Prepare Employee Data	USN-1	As an administrator, I can prepare employee data from spreadsheets for import into ServiceNow.	Spreadsheets contain formatted data in plain text and CSV formats.	High	ServiceNow.
Administrator / HR	Import Employee Data	USN-2	As an administrator, I can upload the employee data to the system.	Employee data is imported successfully and mapped to the correct fields.	High	ServiceNow.
ServiceNow Administrator	Create Target Table	USN-3	As an administrator, I can create the Employee table in the system.	Employee table is created with the correct fields and data types.	High	ServiceNow.
ServiceNow Administrator	Configure Transform Map	USN-4	As an administrator, I can create a Transform Map to map source data to the target table.	Transform Map is created and configured correctly.	High	ServiceNow.
ServiceNow Administrator	Map Fields	USN-5	As an administrator, I can map source spreadsheet fields to the target table fields.	All fields are mapped correctly and the correct data is imported.	High	ServiceNow.
ServiceNow Administrator	Transform Data	USN-6	As an administrator, I can run the Transform Map to import data.	Data is imported successfully and mapped to the correct fields.	High	ServiceNow.
ServiceNow Administrator	Prevent Duplicates	USN-7	As an administrator, I can enable Coalesce using Employee ID to prevent duplicate records.	Coalesce is enabled and duplicate records are prevented.	High	ServiceNow.
Administrator / HR	Validate Import	USN-8	As an administrator, I can view transform history to validate the import.	Transform history shows the process and results of the import.	High	ServiceNow.
Administrator / HR	View Reports	USN-9	As an administrator, I can view employee reports to see the results of the import.	Reports are generated and displayed correctly.	High	ServiceNow.
Administrator / HR	Monitor Dashboard	USN-10	As an administrator, I can view employee analytics dashboard to monitor the import process.	Dashboard is available and displays the correct data.	High	ServiceNow.

Project Outcome

The completed solution supports spreadsheet-based employee data import into ServiceNow through Import Sets and Transform Maps, uses Coalesce to manage repeated imports, validates transformation results, and provides reports and a centralized dashboard for employee data visibility.
