

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Project Name: Import Data using Transform Maps (Spreadsheet)

Date: 31 January 2025

Functional Requirements

The following functional requirements are derived from the Import Data using Transform Maps project. The solution imports structured employee data from a spreadsheet into ServiceNow, transforms it into the target table, prevents duplicate records, validates results, and provides reports/dashboard visibility.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Prepare Employee Spreadsheet	Create spreadsheet with Employee ID, Employee Name, Email, Department and Location.
FR-2	Create Employee Target Table	Create Employee Test table and configure required employee fields.
FR-3	Create Import Set	Load the spreadsheet into the Employee Import staging/import table.
FR-4	Configure Transform Map	Create Transform Map and select Employee Import as source and Employee Test as target.
FR-5	Map Source and Target Fields	Use Auto Map Matching Fields / Mapping Assist to map spreadsheet fields to target fields.
FR-6	Transform Employee Data	Execute the Transform Map and create/update employee records in the target table.
FR-7	Prevent Duplicate Records	Enable Coalesce on a unique employee field such as Employee ID to update existing records instead of c
FR-8	Validate Import Results	Check transform status/history and verify inserted, updated, skipped/ignored records.
FR-9	Generate Employee Reports	Create reports for employees by department, employees by location, and employee list.
FR-10	Create Employee Dashboard	Add the reports to an Employee Analytics Dashboard for centralized monitoring.

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import process and configuration should be easy to follow and operate through ServiceNow.
NFR-2	Data Integrity	Imported employee data should be mapped correctly and verified after transformation.
NFR-3	Reliability	The system should consistently complete valid imports and provide transform status/history for verification.
NFR-4	Performance	Bulk spreadsheet data should be processed efficiently through Import Sets and Transform Maps.
NFR-5	Availability	Imported employee records, reports and dashboard information should remain accessible to authorized users.
NFR-6	Scalability	The solution should support repeated employee data imports and increasing data volume without changing

Project Data Flow Summary

External Spreadsheet → Import Set / Employee Import → Transform Map → Field Mapping → Employee Test Table → Validation / Transform History → Reports → Employee Analytics Dashboard

The project uses Import Sets as a staging area and Transform Maps to map source fields to the target Employee Test table. Coalesce is used to identify existing employee records and avoid duplicate insertion during repeated imports.
