

PROJECT DESIGN PHASE-II

TECHNOLOGY STACK (ARCHITECTURE & STACK)

Date	28 September 2026
Team ID	_____
Project Name	Import Data using Transform Maps
Maximum Marks	4 Marks

Technical Architecture

The project implements an employee data import workflow in the ServiceNow platform. Structured employee data is prepared in a spreadsheet, loaded into an Import Set table, mapped through a Transform Map, transformed into the Employee Test target table, and then validated. Reports and a dashboard are used to present employee data and import results.

Architecture Flow

Source Data	Import Set	Transform Map	Target Table	Reports / Dashboard
Excel / Spreadsheet	Employee Import	Field Mapping + Coalesce	Employee Test	Reports + Employee Analytics Dashboard

The flow above is based on the documented project process: Load Data → Import Set → Transform Map → Employee Test → Reports/Dashboard.

Table-1 : Components & Technologies

S.No	Component	Description	Technology / Tool
1	Source Data	Structured employee data prepared in spreadsheet format.	Excel / Google Spreadsheet
2	Data Import	Loads spreadsheet data into the staging Import Set table.	ServiceNow Import Set / Load Data
3	Transform Layer	Maps source fields to target fields and transforms imported records.	ServiceNow Transform Map
4	Target Data Table	Stores the transformed employee records.	ServiceNow Employee Test table
5	Duplicate Handling	Prevents duplicate records and updates existing records using Transformed Map.	Transform Map.Coalesce
6	Reporting	Creates employee reports by department, location and list.	ServiceNow Reports
7	Dashboard	Consolidates the created reports for centralized visibility.	ServiceNow Employee Analytics Dashboard
8	File Storage	Source files are selected during the Load Data process.	Imported spreadsheet file

Project-specific implementation details documented in the source include Employee ID, Employee Name, Email, Department and Location fields, along with three reports and one dashboard.

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	Not specified in the Import Data using Transform Maps project document.	Not specified
2	Security Implementations	The project document does not specify encryption, firewall, IAM or AWS IAM roles.	Not specified
3	Scalable Architecture	The project document demonstrates an Import Set → Transform Map → ServiceNow Table Sets/Transform Maps.	ServiceNow Table Sets/Transform Maps
4	Availability	Availability or distributed-server configuration is not specified in the project document.	Not specified
5	Performance	The project focuses on accurate bulk import, transformation, duplicate prevention and Transform Maps.	ServiceNow Table Sets/Transform Maps

Project Implementation Summary

The project successfully implements employee data management using ServiceNow Import Sets and Transform Maps. Coalesce is enabled on a selected field to identify existing records, so repeated imports can update existing records rather than creating duplicates. Reports are created for department-wise employees, location-wise employees and an employee list, and these reports are added to the Employee Analytics Dashboard.
